solenoid is normally de-energized. The valve is normally open. This allows oil to flow between rail (10) and the space (5) above piston (7) . Rocker arm (8) is down when the intake valves are open. Pressurized oil flows from rail

### **Intake Valve Actuator Response - Test 385**

The intake valve actuators are used to hold down the rocker arms. This prevents the intake valves from closing. The intake valve actuator is a hydraulic system that uses the engine oil to operate. Oil is allowed to flow in and out of the intake valve actuator when the intake valve actuator is not activated.
