Lightning Bug

The Lampyridae are a family of insects in the beetle order Coleoptera with over 2,000 described species. They are soft-bodied beetles that are commonly called fireflies or lightning bugs for their conspicuous use of bioluminescence during twilight to attract mates or prey. Fireflies produce a "cold light", with no infrared or ultraviolet frequencies. This chemically produced light from the ...

Firefly - Wikipedia

Lightning bugs are part of the Lampyridae family, which is in the order of insects called Coleoptera. That means that lightning bugs are actually a type of beetle ! You might be thinking that lightning bugs don't look like the types of beetles you've seen before.

What Are Lightning Bugs? Are They Different From Fireflies?

Directed by Robert Hall. With Bret Harrison, Laura Prepon, Kevin Gage, Ashley Laurence. A dramathriller, set in the South, about a young boy who longs to escape the misery of his childhood and the misunderstanding of his hometown. A gifted, self-taught, special effects make-up artist. Green dreams of going to Hollywood to make his own monsters.

Lightning Bug (2004) - IMDb

Lightning Bugs are beetles. They can't be "flies" as their name suggests because "flies" are members of the Fly Order. Glow-worms, which produce light similar to Lightning Bugs', also are beetles, but they belong to a different though closely related family, the Phengodidae. There are many Lightning Bug species.

Lightning Bugs (or Fireflies) - Backyard Nature

Fireflies! 12 things you didn't know about lightning bugs Fireflies make summer magical, but there's more to learn about these bioluminescent beauties.

Fireflies! 12 things you didn't know about lightning bugs ...

Fight Like all other beetles, lightning bugs have hardened forewings called elytra, which meet in a straight line down the back when at rest. In-flight, fireflies hold the elytra out for balance, relying on their membranous hindwings for movement. These traits place fireflies squarely in the order Coleoptera.
