A multi-agent system is a system based on a set of agents who cooperate with each other to increase efficiency or achieve goals [11][12][13][14][15]. In our case, the system must supervise assigning tasks and exchange data between agents at home.

Multi-Agent System: An Introduction to Distributed ...

A multi-agent system consists of multiple interacting software components or 'agents.' Software agents are characterized by two basic capabilities: autonomy and flexibility , which make multi-agent technology well suited for implementing distributed, real-time applications.

Multi Agent Systems - an overview | ScienceDirect Topics

A multi-agent system is a computerized system composed of multiple interacting intelligent agents. Multi-agent systems can solve problems that are difficult or impossible for an individual agent or a monolithic system to solve. Intelligence may include methodic, functional, procedural approaches, algorithmic search or reinforcement learning. Despite considerable overlap, a multi-agent system is not always the same as an agent-based model. The goal of an ABM is to search for explanatory insight i
